

Rocky Point Community Club presents herein our annual Water Quality Report (known as a “Consumer Confidence Report”), as required by the Federal Safe Drinking Water Act (SDWA). Rocky Point Community Club is committed to providing you with water that meets or exceeds all state and federal drinking water standards. This report sets out where our water comes from, what the current year tests show about it, and other information that you may wish to know about drinking water.

Rocky Point Community Club utilizes NW Natural Water Services as its state-certified Satellite Management Agency (SMA). NW Natural Water Services performs water system management and operations and is responsible for all water testing, ensuring compliance with all federal, state, and county standards. The management and compliance teams are working in close contact with the Washington Department of Health, the Department of Ecology, and your board of directors/commissioners to improve the standard of service to your water utility to continue providing safe, quality drinking water. For more information about this report, or for any questions you have about your drinking water, please contact the NW Natural Water Services –Washington office.

WATER SOURCE

Our system pumps groundwater from an Island County aquifer and transmits the water to the reservoir. The water is not treated. If you experience any extended deterioration in water quality, please call NW Natural Water Services and they will flush the lines.

WATER QUALITY TABLE

The information set out in the table is based on tests conducted during the year. Terms used in the Water Quality Table and in other parts of this report are defined below.

Contaminant	Test Date	Unit	MCL	MCLG	Result	Source	Violation
Bacteria	Monthly	N/A	N/A	N/A	All Passed	Naturally present	No
Nitrate	Annually	mg/L	10	10	0.12	Runoff – fertilizers, natural deposits, septic tanks	No

TERMINOLOGY

Maximum Contaminant Level Goal (MCLG) - the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Contaminant Level (MCL) - the highest level of contaminant that is allowed in drinking water. MCL's are set as close to the MCLGs as feasible using the best available treatment technology.

Action Level (AL) – the concentration of a contaminant that, if exceeded, triggers treatment or other requirements that a water system must follow.

Parts per million (ppm) or Milligrams per liter (Mg/l) – one part per million corresponds to one minute in 2 years or one penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter (Ug/l) – one part per billion corresponds to one minute in 2,000 years or one penny in \$10,000,000.
